Android App called Find a Park

April 2023

The App was designed using view bindings and Fragments. API was accessed to fetch park details and the user could also see the park in a map which was integrated using the Google API for maps. The App also had notes taking ability which persisted notes even after clearing the app from memory and Firebase Firestone was used as Database.

YouTube Clone Web App

Dec 2020

A web app using ReactJS that uses the YouTube API to fetch YouTube videos. Tried to clone the User Interface of the YouTube Web App.
